Post #1 of 32 Old 07-18-2014, 10:08 PM Thread Starter flunky Rookie Join Date: July 2014 Location: Hyooston Posts: 13 My photos Montgomery Ward - Powr Kraft - TPC2410C 10 Radial Hand Saw (RAS) I have a chance to pick one of them for a song (\$40 or less). It seems to have been sitting in the shed for 10 years and it looks like I hafta dig it up and check on the wasp nest. Anyway, the current owner of Sez he doesn't have a key for it, so if I can't figure out a key solution before buying, I'll work blindly until I get the key. A couple of questions, if you can: What was the quality of this tool? i.e., would I be better off getting one of the older Sears CM units some posts here say are ok? I don't know what my skills or projects will ever need the kind of unit many of you folk need. I know from what I read here that testing (trigger?) switch will be one of the first things to do before buying. They seem to have one of the higher waiver modes for this saw. Is there a way to easily 'hotwire' these things? Are all the keys to these things the same? Or maybe four different versions? Will the locksmith know that I need to bring in a saw or lock without me? Maybe just knowing the number code with the lock will suffice? There is a Youtube video that shows how to use RAS to cut handhold 'indentations' towards the hive. (If you want to find it search for 'beehive handles.' It shows a vertically rotating saw so that the direction of the blade is 90deg to the hand, and then rotating the saw No45deg so that the blade is no longer vertical. I'm probably describing it all wrong, but if you understand what I'm saying, are these adjustments/variations all RASes going to do? I sat on the fence about getting an RAS until I saw that video. While I saw plans for a jig to make for portable circular saws and videos on yt to make pen cuts, doing so with RAS was just waaaay too sexy and fun to watch. The ad is offline post #2 of 32 Old 07-18-2014, 10:36 PM Thread Starter flunky rookie Join Date: July 2014 Location: Hyooston Messages: 13 My photos OK if I wasn't clear enough, here's the clear information about the video that shows the first thing I want to do with RAN. I don't remember the key--- Bee Hive Box Handle - YouTube this jig for table saws--- See how nice--- mikeswoods offline post #4 of 32 Old 07-19-2014, 12:37 PM Senior Member Join Date: August 2012 Location: British Columbia, Messages: 5,679 My photos If you're going to use this as a special price tool certainly seems right, it wasn't at the top of the line seen, but should do what you require of it as it will sit locked in place so that the underlying accuracy doesn't come into play. Depends on the key system, if it is a separate removable key for the switch that locks off and on the buttons, you can just pass it if it is the key that is part of the actual engine switch that is a different story. You can still add an aftermarket switch if you need to. FrankC Online now post #5 of 32 Old 07-25-2014, 12:37 PM Junior Member Join Date: March 2014 Messages: 9 My photos Some things to check before plops down your money: Motor unit should slide smoothly forward and back on hand. The engine shaft should rotate smoothly. Using the handle on the top of the hand, the hand must go all the way from the bottom to the top of the column. The hand should swing left and right and swing at 90 degrees and 45 degrees position. My Dewalt RAS is 35 years young and I still use it regularly. Gary300 offline post #6 of 32 Old 07-27-2014, 03:24 PM Junior Member Join Date: July 2014 Posts: 1 My photos I've had TPC-2610C radial hand seen for nearly 40 years and I guess your very similar. You can use a piece of tongue depressor (an Eskimo stick too thick) in half an inch per inch long as a key. All it does is move the camera lock so it lets the trigger move. When you start the engine you will notice that it is very noisy. This is because the spindle shaft is driven by a set of gear cuts. These gears mean that while you can rotate the blade manually, it will be smooth, but not quite easy. With the help of the gears, Wards was able to design the saw with a minimum distance between the engine spindle and the lower part of the body. This results in a saw that will crosscut finished 4 lumber using 10 blades. Now look at the right side of motor housing. There is a short spindle that is even with a spindle blade. Wards originally had an accessory shaft that screwed on the stupa and would allow you to install a shaper cutter. Above this spindle is another spindle. This one runs on an engine speed that is 20,000 rpm. Another adapter was used for 1/4 of the router's shaft bit. I had to replace the original table several times. Each time the replacement is thicker and used a smoother surface. The latest incarnation is Mr. Sawdust's table with a 1/4 plywood sacrificial top. If you have more questions, please post them here or PM me and I'll see if I can help you. It's a good saw and I hope you get as much benefit from yours as I do from mine. OlJim offline The next user says thank you OlJim for this helpful post: #7 32 Old 09-14-2015, 10:56 AM Junior Member Join Date: Sep 2015 Posts: 3 My quote: Originally published by OlJim View Post I've been TPC-2610C radial hand seen for nearly 40 years, and I assume your very similar. I have one of these saws and the trigger switch in the handle has stopped working. can you help? This is a Tecomaster 10 and was bought from Eatons in Canada about 47 years ago. It has been very well used and still mv MV part of the machinery. Frederick's offline post #17 of 32 Old 03-29-2017, 08:40 PM Senior Member Join Date: March 2015 Location: Garland, TX Posts: 4232 My photos Most of these keys were very simple thin tin metal in short L form. Or you can fashion a simple key from a piece of sheet metal with some scissors. If you don't have time to do it right the first time you will have time to do it more? Toolman50 is offline post #18 of 32 Old 03-31-2017, 04:18 PM Junior Member Join Date: March 2017 Posts: 3 My Photos Eatons (Canada) Power Craft (USA) Hello, I have 10 radial hand saw that was sold by Eatons in Anda under the name Tecomaster. I bought the saw about 47 years ago and it has been in constant use ever since. Unfortunately, the switch in the handle stopped working. Is there anyone out there who knows where I can find the switch for this device? I believe in America it was sold by Montgomery Ward under the name Power Craft. I'm not sure I posted this in the right place frederick's offline post #19 of 32 Old 03-31-2017, 04:28 PM where my desk was seen? Join Date: January 2009 Location: SE, Michigan Posts: 27702 My photos probably won't happen... If you can remove the switch and post a photo of it, we can compare it to other switches of different types. Saw that the old won't have spare parts of the power, obviously. In case you can't find a switch that will fit inside the handle there are other ways to work the saw in a safe order. If you were to wire these 2 leads together, the saw would be constantly ON. You can then add a remote switch, as in the power strip, in which you would connect the saw. Then the power strip switch would become ON/OFF for the saw. I prefer the switch as close to the handle as possible on my RAS for the safety and simplicity of the work. The answer to your question will be as detailed and specific as a detailed and specific question. Good questions also include a sketch or photo that

illustrates your problem. Frederick is offline The next user says thank you to Frederick for this helpful post: Page 3 As has been said, just converting from 120VAC to 240VAC will do anything to help him, all equal things (a reference to Om's law). The engine will only draw as many amplifiers based on how it was designed. I've had the same saw for a few years now. Overall it was a good saw (very much liked the built-in mobile base) but I felt it was a bit undercooked in some circumstances. I sold it earlier this year and now have a Grizzly G1023RL that is a true 3HP-240VAC engine, a huge difference in how it handles thick material. I just ran some 8/4 of the walnut through it and it worked it out with ease. I know would have struggled with the same stuff and I had some of the best blades you could buy on it.
